R documentation

of 'rescaletree.Rd'

May 4, 2017

---

rescale.tree | *Rescales the edge length of the tree relative to the specified mode*

Description

Tree edge length is rescaled as a ratio of the current tree edge length over the specified mode of tree lengths. Mode can be specified as the mean, median, max, or none.

Usage

```
rescale.tree(tree, mode)
```

Arguments

tree   An R object of type tree.

mode   A `character` variable mode to be specified for scaling the tree edge lengths. Written as 'mean', 'median', 'max', or 'none'

Details

An explicit description of the input format for the 'tree' object is shown under 'Examples' below.

Value

Returns an object of tyoe tree with modified edge length characteristic
